

Bangui electricity market trends

How has the electricity market changed over the past year?

At the national level, the past year has witnessed notable progress in key components in the electricity market and pricing system, including transmission and distribution tariffs, the power spot market, power capacity price, and ancillary services markets, favoring the New Power System construction and renewable energy access.

How has China's Electricity Market changed over the years?

According to statistical analysis (see chart below), nationwide market trade in electricity (including intra- and inter-provincial trading) increased year by year between 2017 and 2022, from 1,632 terawatt-hours (TWh) to 5,254 TWh, leaping from 25.9% to 60.8% as a share of China's total electricity consumption.

How much electricity is traded in China in 2022?

In 2022, 230.7 TWh of electricity was traded across provinces and regions in southern China, a 1.4% decrease year-on-year, but conversely there was a 13.4% increase in market-traded power, accounting for 76.2 TWh of that total. The past two years have seen pressure to guarantee electricity supply through the peak loads of summer and winter.

How has Bangladesh's power sector changed over the past year?

Introduction Over the past year, Bangladesh's power sector has undergone sweeping changes amid an unprecedented period of political and institutional transition. The resignation of the former prime minister in August 2024, following mass protests, and the formation of an interim government marked a significant turning point.
