Are power generators suitable for a cabin?

Staying in the cabin can indeed get boring from time to time, and for all your devices to work you will need electricity, which 'off-the-grid' locations don't come with. This is precisely where the power generators come in and generators come in a lot of different types yet not all of them can be suitable for a cabin.

What is a portable generator?

Portable generators are known for their combustion engine, which is specifically designed for producing and conducting temporary electrical power. They're either powered by gas and sometimes even diesel, and are going to be our generator of choice if you have a rather small off-grid cabin with hardly many electrical appliances to speak of.

What size generator do I need?

However, the generator size will depend on the power outage that you're looking for as well. But in general for smaller cabins and tents during a weekend in the woods, or when out camping, the suitable models are generally light, compact, and manageable. Hence, gasoline generators are perfect if you're not looking for a lot of power.

Are portable generators worth it?

Apart from being an amazing electrical source for smaller cabins, portable generators come in rather handy when it comes to providing a lighting solution for construction workers on remote sites. They are also great for emergency lighting at homes when the electricity is out. What do we not like about them?
