

Competition in electricity markets with renewable energy sources

Evidence: A strong negative correlation between prices (\$/MWh) in red and renewable output in blue (MWh) in Germany. The key feature of our work is to study the MOE when thermal producers have a ...

Global overview Renewable energy consumption Renewable energy consumption in the power, heat and transport sectors increases near 60% over 2024-2030 in our main-case forecast. This increase ...

Abstract This paper studies how to design the electricity market to meet demand efficiently and reliably, while achieving environmental objectives. I built a dynamic equilibrium model of production decisions ...

We show when thermal generators have a diverse energy portfolio, meaning that they also control some or all of the renewable supplies, they offset the price declines due to the merit order ...

Yet even with this significant growth in renewable and other zero-emission capacity, the world is still burning, and increasing its use of, fossil fuels. Geopolitical turmoil and volatile markets ...

Research and policy questions: How do electricity firms compete in renewables-dominated markets? How will competition in electricity markets evolve along the Energy Transition? How does the ...

Abstract This paper studies the effects of the diversification of energy portfolios on the merit order effect in an oligopolistic energy market. The merit order effect describes the negative impact of renewable ...

We analyse a model with a home region relying on storable hydropower -- where a dominant firm competes with a fringe -- and a foreign region with intermittent wind power and ...

The IEA examines the full spectrum of energy issues including oil, gas and coal supply and demand, renewable energy technologies, electricity markets, energy efficiency, access to energy, demand ...
