

The Democratic Republic of Congo is the world's major supplier of cobalt, used in electric vehicle batteries, and is asserting its rights as an equal partner in the renewable energy transition.

6Wresearch actively monitors the Congo Battery Technology Market and publishes its comprehensive annual report, highlighting emerging trends, growth drivers, revenue analysis, and forecast outlook.

Chinese companies have invested heavily in developing advanced processing technologies and large-scale production facilities. These factories transform raw cobalt from the DRC ...

Since 2021, the DRC has taken significant steps to establish a regional battery industry, driven by rising global demand for key battery minerals such as cobalt, nickel, manganese, and lithium.

As the EV sector navigates this transition, strategic foresight and portfolio resilience will be critical to capitalizing on the evolving battery metals landscape.

With its large reserves of lithium and cobalt, the DRC has a major role to play in the energy transition. Indeed, these elements are essential components for the manufacture of electric vehicle batteries. ...

Mobilizing strategic capitalism and friendshoring, I argue that recent agreements between the United States and the Democratic Republic of the Congo constitute new supply chain realities. ...

These factories transform raw cobalt from the DRC into high-purity cobalt compounds and integrate them into battery cathodes. Chinese companies like Huayou Cobalt, CATL and BYD have ...

Major powers deploy distinct strategies as U.S., China and India compete for Congo cobalt control in battery supply race.

Cobalt from Congo has a unique chemical composition that can be used as a material fingerprint to develop a digital passport for material across the whole battery value chain. This is an ...
