For example, to increase uptime and improve quality, North Kivu should prioritize energy production and storage capacity, as well as frequency stabilization at micro-hydro-powered facilities.

The first phase of the project will provide electricity to 1,000 households, a school, a hospital, and a military unit. The solar panel installation covers an area of 7,500 square meters.

Reliable electricity is the backbone of modern healthcare, but in Goma, DRC, energy shortages are limiting access to life-saving equipment.
