

In 2023, wind power generated nearly 60% of Denmark's electricity. This made Denmark the country with the highest share of wind in its electricity ...

The precondition for making decisions and shaping regulations in the energy sector is knowledge. Therefore, The Danish Energy Agency produces statistics, key data, projections, analyses, and ...

Denmark continues to be a global leader in variable renewable integration. 2023 was a record year for solar and wind energy generation, providing 64% of demand compared to 60% the year before¹.

The combination of domestic wind power and Norwegian hydroelectricity provides a stable source of renewable, non-biomass electricity (which would be harder to ...

Flak offshore wind farm is part of the Danish Energy Agreement. When it is finished (before 2022), the 600 MW wind farm will be Denmark's largest, relatively low depths in the waters between Denmark ...

Maps with wind speed, wind rose and wind power density potential in Denmark. The GIS data stems from the Global Wind Atlas ([link](#)). GIS data is available as JSON ...

Denmark's electricity mix includes 59% Wind, 14% Biofuels and 13% Solar. Low-carbon generation peaked in 2024.

Denmark installed 238 MW wind energy in 2024, divided between 176 MW offshore and 62 MW onshore. A total of 18 MW was decommissioned, divided between 2 MW offshore and 16 MW ...

Denmark continues to be a global leader in variable renewable integration. 2023 was a record year for solar and wind energy generation, providing 64% of demand compared to 60% the year before¹.

Today, more than half of Denmark's electricity production comes from wind farms.

Denmark's wind power storage configuration ratio
