

# Dutch battery container company

How much CO<sub>2</sub> does inland shipping produce in the Netherlands?

Currently, the entire Dutch transport sector is responsible for 21% of the carbon dioxide emissions (CO<sub>2</sub>) in the Netherlands. In the transport sector, inland shipping accounts for 5% of the carbon dioxide emissions. In the Green Deal on Maritime and Inland Shipping and Ports, agreements were made about making inland shipping more sustainable.

What is a lithium safety container?

Our lithium safety containers are made of high-quality, fire-resistant material that withstand extreme temperatures and conditions. This innovative technology ensures that your batteries are protected even in the most demanding environments. We understand that one size does not fit all.

Are our containers safe?

Our containers meet national security standards, including PGS37. Each container is rigorously tested to ensure it meets strict quality and safety criteria, giving you peace of mind. Our containers are equipped with features such as thermal insulation, pressure relief valves and fire suppression systems.

At the heart of the project is a modular, containerized battery system. These battery packs, roughly the size of standard shipping containers, can be quickly installed and removed from ...
