

# How big a light tube should be made with photovoltaic panels

How big should a solar tube be?

A solar tube can be anywhere from 10 to 22 inches wide, and provides lots of natural sunlight, even on cloudy days. Solar tubes offer some significant advantages compared to traditional skylights. They're less expensive and easier to install, and they prevent the kind of heat loss (and gain) that can come with a full-sized window in your roof.

What is a solar tube?

The solar tube is also known as the sun tube, light tube, sun tunnel, tubular skylight and daylight pipe. It looks exactly like a tube, thus its name. The solar tube mentioned here is not to be confused with thin-film agricultural solar tubes and photovoltaic solar tubes which are mainly made for generating electricity.

Can a 10 inch solar tube light a room?

Yes. On a bright day, a 10-inch solar tube can give you about the same amount of light as three 100-watt bulbs, enough to illuminate a 200 sq. ft. room well. Do solar tubes work at night?

Are solar tubes a good lighting solution for dark interior spaces?

Yes, solar tubes are a very effective lighting solution for dark interior spaces like laundry rooms. However, solar tubes do have a mix of strong advantages and drawbacks when compared with skylights. We'll cover them below. Solar tubes pros and cons:

What Are Solar Tubes? How Do Solar Tubes Work? How Much Do Solar Tubes Cost Compared to Traditional Skylights? Do Solar Tubes Really Work? How Do They Compare to Skylights? The Positive Health Effects of Solar Tubes and Skylights What Are The Best Solar Tubes For My Home? Final Thoughts on Solar Tubes For Your Home Solar tube heads are optically engineered to direct as much light as possible into the tunnel below and come in a variety of sizes which range from about 1 to 2 feet in diameter. They are usually protected with a clear, weather-resistant acrylic dome. The tube skylight piping length can be extended indefinitely, and is lined with a super-reflective...
