

Is the UK equipped with solar power

Are solar farms generating more electricity in the UK?

Solar farms and rooftops in the United Kingdom generated a record 42 percent more electricity from January through May 2025 than during the same period in 2024, according to a new analysis by Carbon Brief. The UK also just had its sunniest spring since record keeping began in 1910, the Met Office said.

How has solar power benefited the UK?

So far, this year's solar electricity output in the UK has avoided gas imports of roughly \$813.9 million, which would have released approximately 6.61 million tons of carbon dioxide. Though this year's solar record was driven partially by the sunniest spring on record, rising capacity also helped.

How much solar power does the UK produce a month?

The amount of electricity generated from solar also hit a new high of 2.5TWh in May 2025, beating April 2025's 2.3TWh into second place. The previous record of 2.1TWh was set in June 2024. The figure below shows the average monthly output of the UK's solar capacity, in MW.

How much energy does the UK need for solar panels?

Source: Carbon Brief analysis of figures from the National Electricity System Operator (NESO). The electricity generated by the UK's solar panels in the first five months of 2025 - at 7.5TWh - is enough to have offset the need for around 16TWh of imported gas.

The deployment of solar also boosts the UK's energy security, through diversifying the energy mix and reducing exposure to international fossil fuel markets.

The UK's solar farms and rooftops generated more electricity than ever before in the first five months of 2025, as the country enjoyed its sunniest spring on record. The figures, revealed in ...

Solar farms and rooftops in the UK generated a record 42% more electricity from January through May 2025 than during the same period in 2024.

The UK solar industry has undergone dramatic change over the past year, spurred by a mix of progressive legislation, evolving grid infrastructure, and soaring demand for renewable talent. ...

The UK Solar Roadmap issued by the UK Government and produced through collaboration with industry presents a comprehensive strategy and clear plan of action to achieve the ...

Renewables accounted for majority of annual UK electricity generation for the first time in 2024, with solar enjoying record highs despite fewer sun hours Gains for PV reflect increased ...

As Great Britain progresses toward a more secure, zero-carbon energy future, we're relying on a wider variety of generation sources than ever before. A main source is sunlight, which ...

Is the UK equipped with solar power

Good weather and rapidly proliferating farms mean solar generation is at record levels British solar power surges past 2024 total on linkedin (opens in a new window)

Find the most up-to-date statistics about solar photovoltaic energy in the United Kingdom (UK)

Solar power in the UK Solar energy has emerged as a beacon of optimism as the world grapples with climate change and the pressing need for sustainable solutions. Solar energy is acquiring significant ...
