Where are solar panels located?

Usually, solar panels of a self-consumption system are located on the roof, although it is not the area closest to the storage system or energy meters. For security and architectural integration reasons, the roof of the buildings is usually determined as the location area for the solar panels.

How do I choose the best location for solar panels?

Selecting the best location for solar panels benefits greatly from using specific tools and expert advice. These resources ensure accurate assessments and optimal placement for maximum energy output. Solar mapping tools analyze sun exposure and shading patterns.

Where should solar panels be installed in the UK?

South-east and south-west facing roofs can also be suitable locations for solar panels, usually generating at least 80% of the energy a south-facing system would produce. Not a bad return. When it comes to roof pitch, the optimal angle for solar panels in the UK falls between 30 and 40 degrees.

Where should solar panels be installed?

Regions closer to the equator enjoy longer periods of daylight throughout the year, making them prime locations for solar panel installations. In contrast, areas farther from the equator experience shorter daylight hours, especially during winter months, which could impact the overall annual energy yield of solar panels.
