

How efficient is a photovoltaic system?

Today, the efficiency of a photovoltaic system is about 24%: that means that the technology allows a quarter of the solar energy received by the modules to be transformed into electricity. Find out how a solar park is built, from the construction phase to energy production, and how a photovoltaic system operates.

What is a photovoltaic module?

Photovoltaic modules: devices made up of a mosaic of interconnected photovoltaic cells. These cells are the most basic element of a photovoltaic system: they directly convert solar energy into electrical current thanks to a phenomenon called the photovoltaic effect.

What are photovoltaic modules made of?

Photovoltaic modules are composed mainly of a semiconductor material, silicon, which is one of the most widespread minerals on Earth and therefore easy to find.
