What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.

What is a fully integrated photovoltaic roof?

Figure 1. Fully integrated photovoltaic (PV) roof "RIS." The solutions that have been proven fall into the following categories: Interlocking panel systems, which either use panels that mimic roofing tiles with the photovoltaic (PV) element embedded in the surface or have a frame bonded to the PV panel which provides the sealing interlock.

Can solar panels be lifted on a roof?

Lifting solar panels onto a roof requires specialized equipment based on the weight, dimensions, and height of the installation.

Should PV panels be over-roof mounted?

The over-roof mounting of PV panels has been the normal practice in many installations. It is simple in concept, and has been proven provided that the attachment through the traditional roof is performed well.
