

What are photovoltaic support structures?

The support structures are the elements that allow the fixing of the modules on the roofs where the photovoltaic installation must be housed, constituting a main element of the solution. Circutor offers a complete range of configurable support structures for any type of installation and roof.

What are photovoltaic structures?

Photovoltaic structures represent the supports for photovoltaic panels. These photovoltaic panels can be with an aluminum frame with a thickness of between 30 mm and 45 mm, or photovoltaic panels with double glass without frames. Below are our structure systems available for ground-mounted power plants:

How many photovoltaic panels can be installed?

Photovoltaic panels can be configured in a portrait or landscape panel section of up to 6 landscape panels. Carport type photovoltaic parking systems structure. Intended for the production of electricity using photovoltaic panels. energy use for the house or nearby premises. Photovoltaic system with installation of vertical type bifacial panels.

What is RRE PV - maximum one support system?

RRE PV - MAX ONE support system for photovoltaic panels with 1 sectional pole and 4 panels mounted in landscape format (horizontally). This is an extremely sturdy and economical structure, considering that it supports 4 landscape panels. Additionally, because it is easy to mount and quickly reduces your installation costs.
