What can a portable power station charge?

All portable power stations can charge up small gadgets like phones and laptops or be used to power lighting. Most can handle small appliances like mini-fridges or TVs. If you want to use power tools, an AC unit, or, in the UK, a kettle, you need to be able to draw thousands of watts.

How long does a portable power station last?

A portable power station's lifespan depends on the type of battery inside. Most new portable power stations, including all the models we recommend here, feature LiFePO4 battery technology, which lasts far longer than older lithium-ion technology. How much more? LiFePO4 power stations will last for more than 3,000 charge cycles, or about 10 years.

How long does it take to recharge a portable power station?

For example, a 1,000-watt-hour power station that's receiving a consistent stream of 200 watts of power from a solar panel would take about 5 hours to recharge. Keep in mind, this is assuming uninterrupted, direct sunlight conditions, which, even then, may produce varied results. Are portable power stations weather-resistant?

What makes a power station a 'portable'?

The term "portable" is sometimes stretched. Batteries are heavy. The larger-capacity power stations are typically on wheels and have telescopic handles, and they are still tough to cart around. If you're looking for something you can actually carry on foot for a distance, you may need to temper your expectations on capacity.
