

Can solar-driven steam generation be used beyond water purification & desalination?

This Review summarizes the recent progress in solar-driven steam generation in diverse functionalizations and highlights its applications beyond water purification and desalination.

Can a solar-powered system generate steam without a concentrating device?

In a solar-powered system for steam generation without a concentrating device, such as a solar distiller, heat and steam are not generated in the same place. The former is generated on the surface of the container, while the latter is normally generated inside the device.
