

Solar Photovoltaic Power Generation Ranking in the United States

Which states generate the most solar energy?

California once again takes first place among the top states generating electricity from solar power this month. The Golden State produced 23.5% of the United States' total of 32,027 thousand megawatt-hours, according to ChooseEnergy.com's January 2026 solar energy generation report.

Who are the best solar power companies in the US?

Several companies, like Cypress Creek Renewables and Recurrent Energy, are leading the solar installation across several states in the US. In this blog, we will cover the top 10 best solar power companies in the USA ranked based on solar installed capacity as of 2024. 1.

Where are the major photovoltaic power projects located?

Other major photovoltaic power projects in the country are located in Texas and California. Solar PV accounts for the vast majority of solar energy capacity in the United States. *For commercial use only

How much solar power does California have?

Solar power capacity is steadily expanding throughout the United States, as more than half of the states now boast 1 gigawatt (GW) or greater of installed solar. California has set an ambitious goal of achieving 100% clean energy by 2045. The state has been at the forefront of renewable energy generation and solar power generation in particular.

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

The Top 11 States for Solar Energy Development As of December 2024, the United States has witnessed substantial growth in solar energy, with a cumulative installed capacity of ...

Explore the top 10 solar companies in the USA for 2026. Discover the industry's best solar companies with innovative solar panels and solutions.

5. North Carolina -- A Southeastern Solar Hub North Carolina leads the southeast in solar deployment and has remained in the national top five for ...

Other major photovoltaic power projects in the country are located in Texas and California. Solar PV accounts for the vast majority of solar energy capacity in the United States.

Top states for generating solar power As of December 2023, California stands at the forefront in net generation from solar photovoltaic (PV) energy when measuring combined output ...

California once again takes first place among the top states generating electricity from solar power this month. The Golden State produced 21.4% of the United States' total of 24,519 thousand ...

Solar Photovoltaic Power Generation Ranking in the United States

5. North Carolina -- A Southeastern Solar Hub North Carolina leads the southeast in solar deployment and has remained in the national top five for several years, driven by significant ...

With over 54 GW of solar installed, enough energy to power over 15 million homes. Texas has the fastest growing solar economy with the largest utility-scale solar and energy storage projects in the ...

Included in the top 10 largest photovoltaic states in the United States are Nevada, Georgia, New Jersey, Virginia, and New York. The following table provides a summary of these states' solar energy profiles.

From the Sunbelt to the Northeast to the Midwest, solar and energy storage are delivering new opportunities to local economies across the United States. Factories are breaking ...
