What is a solar micro inverter?

Solar micro inverters are an emerging segment of the solar power industry. Rather than linking every solar panel in an installation to a central inverter, solar micro inverter-based installations link smaller, or "micro," inverters individually to each solar panel.

What is grid connected solar microinverter reference design?

Microchip's Grid-Connected Solar Microinverter Reference Design demonstrates the flexibility and power of SMPS dsPIC[®] Digital Signal Controllers in Grid-Connected Solar Microinverter systems. This reference design has a maximum output power of 215 Watts and ensures maximum power point tracking for PV panel voltages between 20V to 45V DC.
