

Solar panel information

What is a solar panel?

A Solar panels (also known as " PV panels") is a device that converts light from the sun,which is composed of particles of energy called "photons",into electricity that can be used to power electrical loads.

How do solar panels work?

The flow of electricity results from the characteristics of the semiconductors and is powered entirely by light striking the cell. The main component of a solar panel is a solar cell,which converts the Sun 's energy to usable electrical energy. The most common form of solar panels involve crystalline silicon -type solar cells.

What are solar panels made of?

A typical solar panel consists of silicon cells,a metal frame,wiring elements,and glass. An insulative layer and a protective back sheet protect the panel from excessive heat and humidity. While the general construction of solar panels is pretty standard,the silicon cells are manufactured in two distinct formats:
