

Solar panel rocket

Rocket Lab will provide solar panels, carbon composite panel substrates, solar cells, and photovoltaic assemblies for OneWeb satellites. These components will help deliver the Eutelsat ...

In 2021, Rocket Lab provided more than 450 shipsets of solar array panels to Airbus for their first fleet of OneWeb satellites. Airbus is set to build the first batch of their next-gen 100 ...

NASA plans to use solar electric propulsion to send astronauts to Mars, but the technology will require huge solar arrays that take up precious space in a rocket fairing.

Rocket Lab is showing that's about more than just rockets. The California-based company has introduced a family of customizable solar arrays, designed to fit the changing needs of ...

Rocket Lab takes a leap in satellite technology by offering customizable solar arrays for enhanced power generation in space. This innovative solution increases satellite efficiency, ...

Rocket Lab has unveiled the launch of its new customizable solar panels, Standardized Array (STARRAY).

Rocket Lab USA, Inc. (Nasdaq: RKLB), a leading provider of space systems and launch services, has been awarded a contract by Airbus Constellation Satellites to supply high-efficiency ...

With the days of autonomous space progress, Rocket Lab once again took center stage with the recent achievement: deploying customized solar panels for satellites. The newly introduced product ...

Rocket Lab's space qualified solar panel arrays meet the rigorous demands of space, delivering reliable and efficient power solutions for a wide variety of satellites.

Rocket Lab released a new line of customizable solar arrays built to power satellites in any orbit with unmatched efficiency and flexibility.
