How is solar energy generated?

Solar energy - Electricity Generation: Solar radiation may be converted directly into solar power (electricity) by solar cells, or photovoltaic cells. In such cells, a small electric voltage is generated when light strikes the junction between a metal and a semiconductor (such as silicon) or the junction between two different semiconductors.

What is solar energy?

Solar energy is the conversion of sunlight into usable energy forms. Solar photovoltaics (PV), solar thermal electricity and solar heating and cooling are well established solar technologies.

What are the different types of solar power generation?

Solar power generation is categorized mainly into photovoltaic and photothermal power generation. Photovoltaic power generation involves the use of solar photovoltaic cells to convert sunlight directly into electric power based on the photovoltaic effect.
