

Solar power generation photovoltaic and energy storage policy

At the federal level, there are several key policies, programs, and regulations that impact the development of solar PV and other renewable energy projects, influencing project procurement ...

When some of the electricity produced by the sun is put into storage, that electricity can be used whenever grid operators need it, including after the sun has set. In this way, storage acts as an ...

SEIA has a new policy agenda centered on electric reliability in the United States. The new policy agenda details actions for local, state and federal leaders to take to strengthen the US...

This page describes the patchwork of federal, state, and local policies and regulations pertaining to renewable energy systems that impact project development.

It evaluates how well each country's policies have supported solar energy development, with scores reflecting the success of incentives, regulations, and overall policy frameworks in ...

As the United States grapples with shifting political winds, developers in the distributed solar and storage market are facing a potential policy storm.

That's why power generation and energy storage supporting policies have become the backbone of modern energy strategies. Let's break down how these policies work and why they're critical for ...

SEIA has released a policy blueprint which it claims would "strengthen the reliability of America's electric grid with solar and storage."

-- Today the Solar Energy Industries Association (SEIA) is unveiling a new policy agenda that details the critical actions that local, state, and federal leaders must take to strengthen the ...
