

Study on the current status of solar power generation in Europe

How much solar power does the EU have in 2025?

Source: SolarPower Europe The EU solar generation capacity keeps increasing and reached, according to SolarPower Europe, an estimated 406 GW in 2025. The EU has long been a front-runner in the roll-out of solar energy. Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy.

Does the EU solar sector continue to grow?

The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. SolarPower Europe's latest analysis highlights record installations, policy momentum, and the technology's central role in the continent's clean energy transition. Source: eepowerschool.com

What percentage of European electricity comes from solar energy?

In 2024, 47.5% of the electricity consumed in the EU came from renewables and 23.4% of renewable electricity came from solar energy (Eurostat, January 2026). June 2025 was the first month in history where solar energy was the main source of electricity generated in the EU at 22%. Source: SolarPower Europe

Is the EU ready for solar energy?

The EU has long been a front-runner in the roll-out of solar energy. Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's dependence on imported fossil fuels.

Europe's solar generation hits new high EU solar power output grew 21.7% (i.e., by 54 terawatt-hours, TWh) in 2024, expanding from 9.3% to 11.1% of total generation - a trend mostly ...

The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. SolarPower Europe's latest analysis highlights record installations, policy momentum, ...

Welcome to the EU Market Outlook for Solar Power 2024-2028 After years of stellar growth, the EU solar sector has been hit by a significant deployment slowdown - tumbling from 53% ...

Source: SolarPower Europe The EU solar generation capacity keeps increasing and reached, according to SolarPower Europe, an estimated 406 GW in 2025. The EU has long been a front-runner in the ...

In 2024, solar installations in EU member states generated a total of 304 terawatt hours (TWh) of electricity, marking a 22 percent increase compared to 2023. This outpaced coal-fired ...

The present review study, through a detailed and systematic literature survey, summarizes the world solar energy status along with the published solar energy potential assessment articles for ...

In 2024, the EU's solar PV power production stood at over 296 terawatt-hours. In comparison, solar PV

Study on the current status of solar power generation in Europe

generation one year earlier was 248 terawatt hours, which indicates an ...

In the first half of 2025, Germany and many other European countries generated more solar power than ever before. This was offset by lower electricity generation from wind energy.

Europe is on track to surpass its previous solar power output records this year, with the first quarter (Q1) showing a 32% increase in solar electricity generation compared to the same period ...

The EU Market Outlook for Solar Power 2025-2030 is SolarPower Europe's comprehensive annual report that outlines the current status and forecasts the trajectory of the solar ...
