

What if Estonian power system shuts down?

The capacity of the autonomous electricity supply must generally be ensured by the institution and the person himself or if it is possible then to purchase this service. When the Estonian power system shuts down, HVDC links can be used to restore from a blackout.

When will EE-alarm be tested in Estonia?

A more extensive test of the sirens and public warning system called EE-ALARM is planned for December 10 across Estonia. The first nationwide siren test in Estonia took place on May 14 during the Defence Forces' exercise "Siil". At that time, shortcomings were identified: nearly a third of the sirens did not activate at all, and many were delayed.

Who is the competent authority in Estonia?

According to Regulation (EU) 2019/941 of the European Parliament and of the Council (on risk-preparedness in the electricity sector and repealing Directive 2005/89/EC)¹ (hereinafter referred to as the Regulation), article 3 the competent authority in Estonia is Ministry of Economic Affairs and Communication.

Why did the Estonian siren test fail?

The first nationwide siren test in Estonia took place on May 14 during the Defence Forces' exercise "Siil". At that time, shortcomings were identified: nearly a third of the sirens did not activate at all, and many were delayed. The main cause of the issue was faulty control modules in the devices.
