What happens if a solar panel is cracked?

(Damaged +Broken) When something is cracked, it's usually useless, although it's not always the case. Most people aren't sure how to respond whenever they discover a broken solar panel. Will a panel still work even if it's been cracked? Most solar cells will continue to produce a current even after they've been cracked.

Do solar panels get damaged?

At least most of the time, cracks don't damage the solar cells themselves. These cells are among a solar panel array's most critical components. Even if a solar cell has been damaged, that doesn't compromise the entire panel. Panel performance drops in proportion to the total amount of damage.

Will a broken solar panel affect my energy bill?

Sometimes, broken solar panels might still work; however, they won't work as effectively, causing your energy bills to increase. A few small cracks or micro scratches shouldn't hinder your solar panel's overall performance, and you shouldn't notice the system output decrease immediately.

How do I know if my solar panel is damaged?

First, take a close look at the affected area. You are spotting what looks like a crack on your solar panel doesn't mean much if you saw it while standing on the curb. Get close to the panels, and take some close-up photos of the damage. Cosmetic damages shouldn't be a cause of concern.
