

Turkey wind power

Will Turkey grow its solar and wind energy capacity by 2035?

(Photo Credit: Ministry of Energy and Natural Resources, Turkey) Turkey's Minister of Energy and Natural Resources Alparslan Bayraktar said his country will target to grow its total installed solar and wind energy capacity to 120 GW by 2035, up from the 30 GW it has in operation now, under its new Energy Transition Renewable Energy Strategy 2035.

What percentage of Turkey's electricity is generated by wind?

Wind power accounted for 11% of Turkey's total installed power generation capacity and 11% of total power generation in 2023.

How much wind power does Turkey have?

As of the end of 2024, the total installed power has reached 13 GW and new installations continue rapidly. The wind potential of Turkey is 118,683 MWe for wind speeds of over 6.8 m/s at a height of 50 m and the total WEP (Wind Energy Potential) of Turkey is 48,000 MWe for regions with wind speeds of over 7 m/s.

How much wind energy is installed in Turkey in 2024?

According to the 2024 renewable energy statistics published by the International Renewable Energy Agency (IRENA), Turkey has reached a total installed power capacity of 11,697 MW by 2023. In 2024, the total installed capacity of WPPs reached 13,000 MWe. Global wind energy installed capacity will increase by 143 GW in 2024.

The World Bank has prepared a roadmap that we hope will inform Government policies and plans to meet Turkey's installed capacity targets for offshore wind power.

Turkey's Minister of Energy and Natural Resources Alparslan Bayraktar said his country will target to grow its total installed solar and wind energy capacity to 120 GW by 2035, up from the ...

With an estimated 75 GW offshore wind capacity, the country has set a target of 5 GW by 2035, offering significant growth potential for the sector.

Turkey's wind energy capacity has reached 13,043 megawatts (MW) as of Feb. 13, with approximately 280 wind power plants and more than 4,360 turbines operating across the country's ...

Turkey has set ambitious renewable energy targets aligned with the European Union Green Deal, aiming for 55 % renewables by 2035 and finally, zero-emission by 2050 so for this target ...

Turkey aims to boost its wind energy capacity to 48 gigawatts by 2035, a goal that stems from "a robust industrial base and strategic government support," said Turkish industry and ...

Installed capacity is forecast to increase from 2024 to 2035, at which point wind power is expected to account

Turkey wind power

for 14% of total installed generation capacity. Onshore wind power capacity rose ...

The country reportedly hosts some 380 wind power plants, with more than ten turbines each on average. The Grand National Assembly is expected to vote soon on legislation aimed at ...

The government selected multiple consortiums to develop both onshore and offshore wind projects, with a focus on increasing the share of wind power in the country's electricity generation.

Turkey's installed solar and wind power amounted to 40,689 MW at the end of January, accounting for 33% of the country's total power generation and more than half its overall renewables ...
