Why are lithium-ion power batteries used in New energy vehicles?

Among all power batteries, lithium-ion power batteries are widely used in the field of new energy vehicles due to their unique advantages such as high energy density, no memory effect, small self-discharge, and a long cycle life[.,]. Lithium-ion battery capacity is considered as an important indicator of the life of a battery.

Do power lithium-ion batteries affect the cycle life of a battery pack?

Therefore, the experiment data showed that power lithium-ion batteries directly affected the cycle life of the battery pack and that the battery pack cycle life could not reach the cycle life of a single cell (as elaborated in Fig. 14, Fig. 15). Fig. 14. Assessment of battery inconsistencies for different cycle counts. Fig. 15.

Do lithium-ion batteries have a health status?

The health status of lithium-ion batteries is limited by various factors such as capacity, internal resistance, and multiplicity. The estimation of the SOH of lithium-ion batteries can effectively determine the real-time and future operating conditions within the battery and is of great research importance.

How to improve the service life of power lithium-ion batteries?

Mentioning the service life of power lithium-ion batteries, developing the high-property cathode/anode materials, high-security electrolytes, separator with superior safety properties is very vital. The corresponding measurements aim to increase the charge storage capacity, further the service life.
