

Discover how renewable energy in Vietnam is transforming the nation's economy, grid, and regional power through policy, offshore wind, and solar innovation.

According to GlobalData, Vietnam's cumulative renewable energy capacity is projected to reach 112.1 GW by 2035, growing at a compound annual growth rate (CAGR) of 14.3 percent from ...

Development of new and more efficient renewable energy technologies (e.g., new generation solar cells, large-scale offshore wind power, green hydrogen, ocean wave energy).

Vietnam is now well-positioned to transition to the next phase of its clean energy journey - adopting cost-effective models such as competitive green auctions for renewables, advancing ...

Vietnam's renewable energy market is already expanding at pace. Between 2025 and 2033, the market is expected to grow at a compound annual growth rate (CAGR) of 11.2%, driven by ...

In line with global trends, Vietnam is undergoing significant shifts in its electricity production structure. According to the International Renewable Energy Agency (IREA), Vietnam is ...

You know, Vientiane's electricity demand grew 12% annually since 2020 - that's twice Southeast Asia's average. With hydropower providing 80% of Laos' electricity, recent droughts have exposed the ...

As Vietnam braces for a significant surge in electricity demand, projected at 12%-13% by 2025, the country is simultaneously witnessing an influx of investments in the renewable energy sector.

VIENTIANE: Laos' power development strategy targets increasing variable renewable energy (mainly solar and wind) to 11 per cent by 2030, a goal that officials say is vital for boosting ...

Vietnam's manufacturing competitiveness now depends directly on renewable energy. Corporate procurement is expanding, solar-plus-storage projects are being designed around ...

Vientiane renewable energy growth
