

Which kind of house cannot install photovoltaic panels

Do solar panels need a mansion-sized roof?

What matters most is the total sunlight exposure your roof receives across the seasons - and that's something professional assessments are designed to uncover. When people picture solar panels, they often imagine needing a huge roof with acres of space, but you don't need a mansion-sized roof to make solar worthwhile.

Are solar panels right for Your House?

It's often the first hurdle homeowners hit when exploring renewable energy. Many people assume you need the "perfect" roof - south-facing, sunny, and spotless - to benefit. The truth is far more encouraging: solar panels can work for a wide range of homes, even if your roof isn't textbook ideal.

Can you install solar panels on a house without permission?

Homeowners - If you own your property outright, solar panels usually fall under permitted development. As long as they don't extend more than 200mm from the roof, sit lower than the highest point, and aren't considered to spoil the building's appearance, you can typically install without formal permission.

Is my roof suitable for solar panels if it doesn't face south?

By using angled mounting frames, panels can be tilted towards the sun to boost performance and reduce the chance of dirt or rainwater building up. The flexibility of modern systems means very few roofs are ruled out just because of their pitch. So, is my roof suitable for solar panels if it doesn't face directly south? Absolutely.
