

Wind power generation record table for a single day

The most power generated by a single wind turbine in a day is 384.1 megawatt-hours, achieved by the Goldwind GWH252-16MW in the Zhangpu Liua0 Offshore Wind Farm off the coast of Fujian, China, ...

Electricity generation from wind established a new record in the United States in April, and wind generation exceeded coal-fired generation in both March and April, data from our July 2024 ...

The repository (called PLUSWIND) is publicly available and contains hourly wind speed and generation estimates covering 2018 - ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...

The Global Wind Power Tracker (GWPT) is a worldwide dataset of utility-scale, on and offshore wind facilities. It includes wind farm phases with capacities of 10 megawatts (MW) or more.

Historical hourly time series of wind and solar generation profiles for every plant within the United States (US) that is part of the Energy Information Administration (EIA) 2020 dataset for the ...

The repository (called PLUSWIND) is publicly available and contains hourly wind speed and generation estimates covering 2018 - 2021 for existing wind plants located within the contiguous ...

Britain's wind turbines set a new wind generation record, generating an impressive 22.7 gigawatts (GW) at 7:30 pm on November 11. That was enough electricity to power 22 million homes, ...
